

Batch Processing

Direct your efforts towards forensic examination, not data entry and administration.

Batch Processing is a secure, web-based interface that facilitates bi-directional communication between Forensic Advantage and your laboratory equipment.

Real-Time Collaboration

With real-time, bi-directional data exchange between your Laboratory Information Management System (LIMS) and Lab Equipment, we take the "labor" out of collaboration!

Personalized analyst notifications and dashboards, configured to your organization's specific workflows, enable easy assignment of batch samples by multiple analysts in real-time. Say goodbye to manual data entry of results in your worksheets and reports.

Increased Efficiency

- Manual recording of sample locations and their corresponding results is time-consuming and susceptible to human error.
- With Batch Processing, the assignment of samples from your cases to the correct well destinations is efficiently managed within Forensic Advantage. The system then promptly imports results back into their respective case files, eliminating the need for manual data entry and mitigating the risk of errors.

Customized Workflows

- Our team of experts collaborates with each agency to configure Batch Processing, ensuring it aligns seamlessly with the unique requirements of your specific lab equipment and workflows.
- We partner with you to determine the optimal process setup. This tailored approach enhances the efficiency and effectiveness of your overall data processing and reporting procedures.

Standardized Reporting

- Bi-directional communication automates the report generation process, ensuring standardized and accurate reports are compiled automatically from your testing results.
- Eliminates the need for manual report construction and enhances the efficiency of your reporting procedures.
- A streamlined approach not only saves time but also reduces the risk of errors, providing more reliable and consistent reporting.

Real-Time Awareness

- Profile Dashboards serve as an excellent hub for real-time notifications, displaying information about finished samples and batches, samples requiring your review, and alerts for batches that are partially filled and available.
- Maximize the efficiency of your lab personnel and equipment through streamlined batch processing, ensuring seamless monitoring and management of your workflows.
